

AMAN AZIZ

Full-stack engineer | backend, AI systems, real-time

+91 93159 78211 | amanaziz2020@gmail.com | [linkedin.com/in/aman-aziz](https://www.linkedin.com/in/aman-aziz) | github.com/tutankhaman | aamn.dev/tldr

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Rust, C++

AI & LLM: Groq, Gemini, OpenAI, Vercel AI SDK, LangChain, MCP, pgvector, Deepgram, LLM evals

Backend: Node.js, Bun, Elysia, Express.js, Prisma, PostgreSQL, Redis, RabbitMQ, BullMQ, WebSockets, MongoDB, Yjs (CRDT)

Frontend: React.js, Next.js, Tailwind CSS, Vite, Tauri

Infra & Tools: AWS, GCP, Cloudflare, GitHub Actions, Grafana/LGTM, Linux, Git, Puppeteer, Figma

EXPERIENCE

Singularity Works

Aug 2025 - Present

Co-Founder & Lead Developer

Remote

- Redesigned and rebuilt a client's e-commerce site in Next.js and TypeScript with a Node backend, replacing a legacy site; reached 10k unique visits in the first week of launch from the client's existing audience and search traffic
- Owned delivery end to end (frontend, backend, infra) for 3 production e-commerce sites for global clients, shipped on schedule with Lighthouse 100 for SEO and Best Practices
- Ran customer discovery with client stakeholders to find the real bottleneck, then set scope and success criteria before building
- Built GitHub Actions CI/CD with safe rollouts and monitored production with Grafana/LGTM (metrics, tracing, alerting) across GCP and AWS

ACHIEVEMENTS

- 1st Place:** MLH HackByte 4.0, a Major League Hacking global hackathon (48-hour team build)
- 1st Place:** Summer of Codefest 2025, national-level hackathon
- CodeForces:** 1307 rating; open source contributor to AsyncAPI

PROJECTS

Larity | *Tauri, TypeScript, Elysia, pgvector, BullMQ, Prisma, Redis*

larity.itssingularity.com

- Built and ran in production an AI-native pipeline (pre-filter, Groq intent/escalation triage, pgvector cross-utterance retrieval, Gemini severity reasoning) with evals against human reviewers: 92% agreement, 5-10% false positive rate, sub-2s latency, \$1.22 per 1-hour meeting (explicit latency/cost tradeoffs)
- Debugged real-world model failures and engineered zero-enrollment speaker attribution via dual-channel audio capture with clock-drift normalization across distributed clients, no stored audio
- Built a post-meeting knowledge graph with vector memory, exposed through RESTful APIs, powering a Q&A assistant across meeting history
- Grew to 332 active users through cold outreach and technical content distribution, iterating on real usage feedback pre-general-availability

Chorus | *Next.js, React Flow, Bun, Elysia, WebSockets, SpacetimeDB*

github.com/singularityworks-xyz/chorus

- Won 1st Place at MLH HackByte 4.0 with an infinite-canvas orchestration workspace where multiple coding agents run in parallel across isolated Git worktrees, turning fuzzy engineering workflows into a shipped, working system
- Implemented human-in-the-loop controls (step-by-step approval gates, dependency wiring, model racing) to keep parallel agent workflows auditable and reliable, with attention to model failure modes
- Engineered real-time state sync across distributed sessions via SpacetimeDB and WebSockets; fully self-hostable and controllable remotely from a phone

EDUCATION

Vellore Institute of Technology, Bhopal

Sep 2023 - Sep 2027

Bachelor of Technology, Computer Science and Engineering

8.32 GPA

- Relevant Coursework:** Data Structures & Algorithms, Distributed Systems, Computer Networks, Parallel Computing, Database Management Systems, Operating Systems

CERTIFICATIONS

- Anthropic:** Introduction to Model Context Protocol
- IBM:** Frontend Development with React, Backend Development with Node.js, Python for Data Science and AI
- Google:** Bits and Bytes of Computer Networks
